

GRUPO ANTENA 3

Customer Profile

The Antena 3 Group is one of Spain's leading communications groups.

A major player within its sector, in 2009 it broke with the traditional television model by launching the Television 3.0 project which involves the Antena 3 television channel becoming a global multi-support content operator.

Industry

Media, Press, TV

Challenges

- Security solution must protect both the infrastructure and the data from all threats
- Data must be constantly available without any halt in production due to virus threat or cyber attack

Kaspersky Lab Solution

Kaspersky Business Space Security

Results

- Work stations, mobile devices and servers are protected against every type of threat
- Greater stability, protection, security and compatibility to the applications
- Reduced impact on the client stations' performance
- Manufacturer's support gives additional confidence

CASE STUDY | Antena 3 Group

With Kaspersky Lab's Business Space Security installed, Antena Group's data is now totally secure and fully accessible to users

The Antena 3 Group is one of Spain's leading communications groups.

A major player within its sector, in 2009 it broke with the traditional television model by launching the Television 3.0 project which involves the Antena 3 television channel becoming a global multi-support content operator. This technological objective requires a reliable, rounded security solution to protect prime assets—technical infrastructure and data—so that its service is never slowed down or interrupted by viruses or attacks by cyber criminals.

Security Challenge

For the Antena 3 Group, data is a vital asset. For the IT services alone, which are all managed and provided by I+3, the company has over 77 Terabytes of storage where their production is based, though their systems are designed to support a greater degree of scalability for their storage capability. This means that a security solution is required which protects both its infrastructure and its data from all threats and which can minimize the risk of routine tasks being rendered impossible.

"The Antena 3 Group needs the data it works with to be constantly available, and halting production due to the threat of a virus or cyber attack, with the resulting cost in terms of money, confidence and reputation, is not an option. Protecting the equipment we work with, and our data, is essential in order for us to carry out our work," insists Miguel Duque, Project Manager in I+3's Department of Operations, Systems and Data Security.

“The new antivirus solution from Kaspersky Lab that was implemented in the Antena 3 Group has brought greater stability, protection, security and compatibility to the applications, as well as reduced impact on the client stations’ performance.”

Miguel Duque,
Project Manager
I+3’s Department of Operations, Systems
and Data Security

Solution

The Antena 3 Group has some 350 servers installed in the IT area. Of these, 75% run on Microsoft operating systems with the rest being based on Linux systems. In terms of work stations, they mainly use PCs, of which over 98% run with Microsoft systems, the rest being Macintosh and the MacOS system.

For some time, effort has focused on achieving complete compatibility with all the software installed for the various technical work areas: administration, operations, production and business. Thus, within I+3, the possibility was raised of finding a different security solution that would permit this. After analyzing various products, they opted for Kaspersky Lab’s Business Space Security solution: “We went with Kaspersky Lab because it gives us a complete, efficient platform that meets our needs.

The tests we ran with the product were satisfactory in every area.” The Antena 3 Group has acquired 4,000 Business Space Security licenses to cover its security needs. To help the administrators do the implementation, knowledge is being transferred by its integrator, ITS: “The previous pilot we completed with Kaspersky Lab, which enabled the administrators to familiarize themselves with many of the operations they’d be doing, also proved extremely useful,” adds Miguel Duque.

Results

The new antivirus solution from Kaspersky Lab that was implemented in the Antena 3 Group, “has brought greater stability, protection, security and compatibility to the applications, as well as reduced impact on the client stations’ performance,” continues Miguel.

The Antena 3 Group has contracted support from integrator ITS, and also has Kaspersky Lab’s one-year guarantee. “We channel all incidents to ITS, but having direct support from Kaspersky Lab is added value. Having the manufacturer’s support gives additional confidence.”

With Kaspersky Lab’s Business Space Security installed, the Antena 3 Group has succeeded in protecting its work stations, mobile devices and servers against every type of threat, and in preventing epidemics and keeping the Group’s data totally secure and accessible to users.
