

Kaspersky®

Administration Kit 8.0

Anti-Virus 6.0 MP4

What's new in Release Candidate 1

Client:

Kaspersky Anti-Virus 6.0 MP4

Better Protection

- New engine inside MP4 makes threat detection more efficient and proactive
- Device control functionality allows USB devices connected to the client to be controlled and blocked
- Client firewall is ready to protect computers working in IPv6 networks

Better Performance

- New engine is faster and less resource-intensive
- MP4 requires far fewer reboots to update its components

Better Usability

- GUI improved to provide flexible configuration

New Platform Support

- Support for upcoming Microsoft Windows 7 and Server 2008 R2 is added

Management System:

Kaspersky Administration Kit 8.0

Out-of-the-Box Protection

- Single product package containing everything required to protect network immediately after installation
- New deployment scenarios added including 1-click deployment and native GPO-based deployment support

- Removal of third-party protection software and Kaspersky Anti-Virus deployment in one step
- Optimized default settings are based on best practices and require less customization
- Automatic license management makes manual license installation obsolete
- Customizable dashboards provide continuous system health monitoring

Great Usability Improvements

- Easier access to the most important and usable features for beginners
- More advanced configuration options for expert users
- Better control over user interface can make antivirus protection completely invisible for end users
- Streamlined policy inheritance supports more versatile organization structures

New Features and Benefits

- Better performance and scalability with tens of thousands of clients per Administration Server
- Update verification to test updates before distribution them across the network
- Postponed processing — optional centralized decision making for infected objects on a per-incident basis
